

Vision

Vision by BEENET is a proprietary monitoring solution for Echo360 administrators (“Administrators”). With its ease of use design, **Vision** integrates seamlessly with your institution’s Echo360.

Vision provides real time pre-emptive monitoring, an early detection solution supporting successful institution-wide video content capturing.

Vision automatically monitors all Echo360 recordings simultaneously with early detection notifications. It is supported by BEENET’s Tier 1 Technical Support Service team for greater success, and provides Administrators a dashboard access for ease of monitoring.

Vision is able to help your Administrators monitor recordings across multiple locations in real time, respond more quickly to system errors, and generate more accurate data analytics - all from a single dashboard.

“Vision is an impressive and beautiful system and has helped us tremendously in our daily operations. We do not have the luxury of time to check every single class on a daily basis. But with Vision, we are able to monitor 22 class locations from a single dashboard and get immediate notification of any recording errors. Previously it was only when a student alerts us to a recording error that we are able to check the system and usually by this point in time, we have already lost the video footage. With Vision, our team is better able to conduct round the clock monitoring for early detection errors to minimise the number of failed recordings.”

— Management Development Institute of Singapore

We believe that Vision’s pre-emptive monitoring features for your Echo360 will produce better outcomes, and improve ROI for your institution.

Our teams will be happy to discuss a possible integration of your Echo360 with Vision.
